* Caution

- [1] Reflow soldering should not be done more than one time.
- [2] Repairing should not be done after the LEDs have been soldered. When repairing is unavoidable, suitable tools have to be used.
- [3] Die slug is to be soldered.
- [4] When soldering, do not put stress on the LEDs during heating.
- [5] After soldering, do not warp the circuit board.
- [6] Recommend to use a convection type reflow machine with 7 ~ 8 zones.

Precaution for use

- [1] Acriche series run on high voltage such as 110 V or 220 V.
- [2] Please don't touch the PCB surface, which has built-in terminals and chips, with your hands or metals, while Acriche series is running.
- [3] Please don't add or change wires, while Acriche series is running.

Handling of silicone resin for LEDS

- [1] Acriche series is encapsulated by silicone resin for the highest flux efficiency.
- [2] Notes for handling of Silicone resin Acriche series.
- [3] Avoid touching silicone resin parts especially by sharp tools such as Pincette (Tweezers).
- [4] Avoid leaving fingerprints on silicone resin parts.
- [5] Dust sensitivity silicone resin need containers having cover for storage.
- [6] When populating boards in SMT production, there are basically no restrictions regarding the form of the pick and place nozzle, except that mechanical pressure on the surface of the resin must be prevent.
- [7] Please do not force over 3000 gf impact or pressure diagonally on the silicon lens. It will cause fatal damage of this product.
- [8] Please do not recommend to cover the silicone resin of the Acriche series with other resin (epoxy, urethane, etc).
