- 7. Outline Dimensions
- 8. Packing
- 9. Soldering
- 10. Precaution for use

## **HT300**

## **Description**

This revolutionary package design allows the lighting designer to reduce the number of LEDs required and provide a more uniform and unique illuminated appearance than with other LED solutions.

This package LEDs are designed for high current operation and high flux output application. But the package's design features better thermal management characteristics than other LED solutions. Because of these advantages, this product have many applications. Such as automotive tail, stop and turn signal lamps, and electronic signs etc.

## **HT300**

#### **Features**

- High flux output and high luminance
- Designed for high current operation
- Uniform color
- Low profile and low thermal resistance
- Packaged in tubes for use with automatic insertion equipment

#### **Applications**

- Automotive exterior lighting
- Electronic signs and signals
- Channel letter / lighting
- Decorative lighting
- Specialty Lighting

## 2. Absolute Maximum Ratings ( $T_a = 25^{\circ}$ C)

		ltem	Symbol	Value	Unit
		DC Forward Current	I <sub>F</sub>	40	mA
		Forward Peak Pulse Current	[1]	100	mA
	1	Reverse Voltage	$V_R$	5	V
Γ	1	Power Dissipation	$P_{D}$	184	mW
	7	Operating Temperature	T <sub>opr</sub>	-30 ~85	°C
		Storage Temperature	T <sub>stg</sub>	-40 ~ 100	°C
		Solder Temperature	$T_{\rm S}$	260°C for 5second [2]	°C

#### Notes:

[1]  $t \le 0.1$ ms, D = 1/10

[2] No closer than 1.5mm from the base of the stopper.

## 3. Electro-Optical Characteristics ( $T_a = 25$ °C, $I_F = 40$ mA)

ltom	Symbol	Value		Unit	
ltem		Min.	Тур.	Max.	Offic
Luminous Flux [3]	$\Phi_{}^{[4]}$	2.0	3.0	-	lm
Luminous Intensity	$I_V$	-	6000	-	mcd
Dominant Wavelength <sup>[5]</sup>	$\lambda_d$	516	526	532	nm
Forward Voltage <sup>[6]</sup>	$V_{F}$	-	3.6	4.6	V
View Angle	<b>2</b> θ <sub>½</sub>		30		deg.
Thermal Resistance	$R heta_{ extsf{J-A}}$		200		°C /W
Optical Efficiency	$\eta_{opt}$	-	18	-	lm/W
Reverse Current (at $V_R = 5V$ )	$I_R$	-	-	5	μA

#### Notes:

- [3] SSC maintains a tolerance of  $\pm 10\%$  on flux and power measurements.
- [4]  $\Phi_V$  is the total luminous flux output as measured with an integrated sphere.
- [5] Dominant wavelength is derived from the CIE 1931 Chromaticity diagram.
  - A tolerance of ±0.5nm for dominant wavelength.
- [6] A tolerance of  $\pm 0.05$ V on forward voltage measurements.

# 4. Reliability Tests

U.					
		ltem	Condition	Note	Failures
11111	9	Life Test	$T_a = RT$ , $I_F = 40mA$	1000hrs	0/22
	Hię	gh Temperature Operating	$T_a = 85^{\circ}\text{C}, \ I_F = 10\text{mA}$	1000hrs	0/22
	Lo	w Temperature Operating	$T_a = -30^{\circ}\text{C}, I_F = 40\text{mA}$	1000hrs	0/22
	Y	Thermal Shock	$T_a$ = -40°C (15min) ~ 100° (15min) (Transfer time : 10sec, 1Cycle = 30min)	100 cycles	0/40
	Re	sistance to soldering Heat	$T_s$ = 235 ± 5°C, $t$ = 4 ± 1sec	1 time	0/22
		ESD (Human Body Model)	1kV, 1.5kΩ; 100pF	1 time	0/22
	н	igh Temperature Storage	<i>T<sub>a</sub></i> = 100°C	1000hrs	0/22
	L	ow Temperature Storage	T <sub>a</sub> = -40°C	1000hrs	0/22
		Temperature Humidity Storage	T <sub>a</sub> = 85°C, RH = 85%	1000hrs	0/22
		Temperature Humidity Operating	$T_a = 85^{\circ}\text{C}, RH = 85\%, I_F = 10\text{mA}$	500hrs	0/22

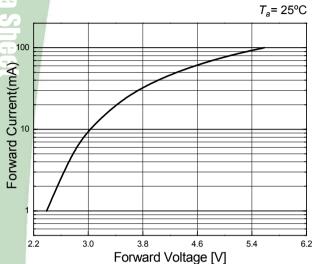

## < Judging Criteria For Reliability Tests >

)	$V_{F}$	USL <sup>[1]</sup> X 1.2
	$I_R$	USL X 2.0
	$\Phi_{V}$	LSL [2] X 0.5

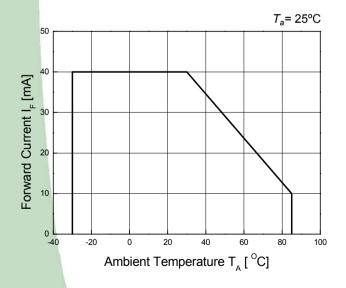

Notes:

[1] USL: Upper Standard Level [2] LSL: Lower Standard Level.

# 7. Outline Dimensions

Notes: Protruded epoxy is 1.0mm maximum.

## 8. Packing

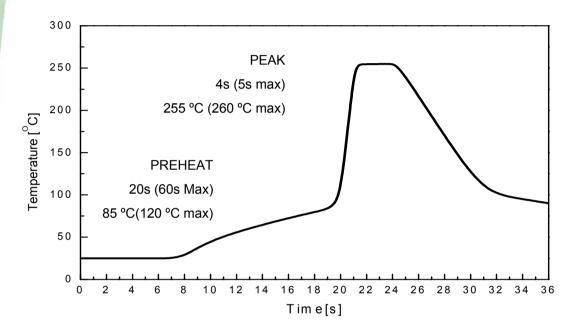

# 9. Soldering Profile

- 1) Recommended Wave Soldering Conditions / Profile
- Preliminary heating to be at 85°C(120 °C max) for 20 seconds(60 seconds max).
- Soldering heat to be at 255 °C (260°C max) for 4 seconds (5 seconds max.)
- Soak time above 200 °C is 5 seconds

#### 2) Hand Soldering conditions

• Not more than 3 seconds at max. 350°C, under Soldering iron.

#### 3) Caution

- Lead frames are silver plated copper alloy. This substance has a low thermal coefficient (easily conducts heat)
- No closer than 1.5mm from the base of the stopper.
- The LEDs must not be repositioned after soldering.
- Do not apply any stress to the lead particularly when heat.

Note: In case the soldered products are reused in soldering process, we don't guarantee the products.

- 1) Storage

   Before opening the package
  Avoid the absorption of moists
  box(or desiccator) with a des
  Temperature: 5 °C~30 °C Hu Avoid the absorption of moisture, we recommended to store High Flux LEDs in a dry box(or desiccator) with a desiccant. Otherwise, store them in the following environment: Temperature :  $5^{\circ}$ C~30°C Humidity : 50% max.
  - After opening the package
    - a. Soldering should be done right after opening the package(within 24Hrs).
    - b. Keeping of a fraction
      - Sealing
      - Temperature : 5 ~ 40 °C, Humidity : less than 30%
    - c. If the package has been opened more than 1week or the color of desiccant changes, Components should be dried for 10-12hr at  $60\pm5$  °C
  - Any mechanical force or any excess vibration shall not be accepted to apply during cooling process to normal temp. after soldering.
  - Avoid quick cooling
  - Leadframes are silver plated copper alloy. The silver plate surface may be affected by environments which contains corrosive substances. Please avoid conditions which may cause the LEDs to corrode, tarnish or discolor.

## 2) Static Electricity

- Static Electricity and surge voltage damage the LEDs. So it is recommended that a wrist band or an anti-electrostatic glove be used when handling the LEDs.
- All devices, equipment and machinery must be properly grounded. It is recommended precautions be taken against surge voltage to the equipment that mounts the LEDs.

#### Heat Generation

- Thermal is one of the important parameter to design the end product. Please consider the heat generation of the LEDs.
- The operating current should be decided after considering the ambient maximum temperature of LEDs.

#### 4) Others

- The color of the LEDs is changed a little by an operating current and thermal.
- Anti radioactive ray design is not considered for the products listed here in.
- Gallium arsenide is used in some of the products listed in this publication. These products
  are dangerous if they are burned or smashed in the process of disposal. It is also dangerous
  to drink the liquid or inhale the gas generated by such products when chemically disposed.
- This device should not be used in any type of fluid such as water, oil, organic solvent and etc. When washing is required, IPA(Isopropyl Alcohol) should be used.
- When the LEDs are illuminating, operating current should be decided after considering the junction temperature.
- Cf.) Please refer Ambient temperature vs. Forward Current graph on page 5
- The appearance and specifications of the product may be modified for improvement without notice.
